Impact Expected & Action Suggested due to heavy/very heavy/extremely heavy rainfall

- ❖ **Isolated heavy to very heavy rainfall with extremely heavy rainfall likely over Meghalaya on 12th July.**
- ❖ **Isolated very heavy rainfall likely over Sub-Himalayan West Bengal & Sikkim on 12th July; Bihar and Gangetic West Bengal on 13th July; Assam & Meghalaya during 13th-14th July.**

Impact Expected

- Localized Flooding of roads, water logging in low lying areas and closure of underpasses mainly in urban areas.
- Occasional reduction in visibility due to heavy rainfall.
- Disruption of traffic in major cities due to water logging in roads leading to increased travel time.
- Minor damage to kutcha roads.
- Possibilities of damage to vulnerable structure.
- Localized Landslides/Mudslides/landslips/mudslips/landsinks/mudsinks.
- Damage to horticulture and standing crops in some areas due to inundation.
- It may lead to riverine flooding in some river catchments (for riverine flooding please visit Web page of CWC)

Action Suggested

- Check for traffic congestion on your route before leaving for your destination.
- Follow any traffic advisories that are issued in this regard.
- Avoid going to areas that face the water logging problems often.
- Avoid staying in vulnerable structure.

Agromet advisories for likely impact of Heavy Rainfall

- In **Assam**, Ensure proper drainage to drain out excess rain water from the fields of sugarcane, soybean, pigeon pea, jute & sesame and fruit orchards.
- In **West Bengal**, maintain proper drainage in rice and finger millet nurseries as well as ginger, tomato, brinjal, Dalley khorsani and other vegetable fields to prevent waterlogging. Drain out excess water from the crop fields. Harvest all the matured crops and vegetables. Harvest mature tea leaves and vegetables during rain. Inspect and strengthen bunds around rice nurseries to prevent flooding and maintain adequate drainage.
- In **Jammu & Kashmir**, make arrangements to drain out excess rainwater from rice nursery and fields of maize and green gram.
- In **Punjab**, make arrangements for removal of excess water from cotton and maize fields.
- In **Haryana**, drain out the standing water from cotton fields immediate after excess rain.
- In **Himachal Pradesh**, prioritize good drainage in crop fields of cucurbits, tomato, capsicum and maize fields to avoid waterlogging.
- In **East Uttar Pradesh**, ensure proper drainage in fields of rice, maize, sesame and vegetables.
- In **Bihar**, postpone irrigation in standing crops and apply fertilizers and pesticides only when the sky is clear. Ensure proper drainage in crop fields prone to waterlogging to prevent crop damage due to excess rainfall.
- In **Arunachal Pradesh**, Drain out excess water from crops (rice, maize, soybean, finger millet). Where large gaps have formed due to crop loss, carry out gap filling where feasible.
- In **Uttarakhand**, delay sowing of groundnut, soybean and maize till the weather improves. Maintain proper drainage channels in already sown fields of groundnut, soybean, maize, tomato and chilli.
- In **Meghalaya**, Ensure proper drainage in rice nursery beds and field of maize, cow pea, okra and ginger crop. Strengthen nursery bunds to prevent runoff and seedling washout.
- In the regions expecting heavy rainfall, including **Chattisgarh and Odisha** withhold irrigation in standing crops, make necessary arrangements to remove excess rain water from the crop fields.

Agromet advisories for likely impact of Thunderstorm / Gusty Winds

- In **Jammu & Kashmir, Ladakh, Coastal Andhra Pradesh, Telengana, Rayalaseema**, post-pone fertilizer application and other field activities
- Shift the harvested produce in safer places or cover the produce with tarpaulin sheets in the fields. Tie the harvested crops securely and cover them to minimize the risk of displacement from strong surface winds.
- In **Keralam, Coastal Andhra Pradesh, Telengana, Rayalaseema, Karnataka and Tamilnadu**.
- Provide mechanical support to horticultural crops and staking or support to vegetables and young fruit plants / fruit-bearing plants to avoid lodging due to strong winds.

Agromet advisories for likely impact of High temperatures/ Heat Waves

- In Coastal Andhra Pradesh, provide light irrigation to maintain adequate moisture in standing crops

Livestock / Poultry / Fisheries

- Keep the animals inside the shed during heavy rainfall and provide them balanced feed.
- Store the feed and fodder in a safe place to prevent spoilage.
- In regions with high temperatures and heat wave conditions, provide clean, cool drinking water to animals, and cover the roofs of poultry sheds with grass to reduce the adverse effects of heat.
- Construct an outlet with proper netting around the ponds to drain excess water, thereby preventing fish from escaping in the event of overflow.

Severe Heat Wave: Maximum Temperature Departure from normal $\geq 6.5^{\circ}\text{C}$ (b). Based on Actual maximum temperature Heat Wave: When actual maximum temperature $\geq 45^{\circ}\text{C}$. Severe Heat Wave: When actual maximum temperature $\geq 47^{\circ}\text{C}$. (c). Criteria for heat wave for coastal stations When maximum temperature departure is $> 4.5^{\circ}\text{C}$ from normal. Heat Wave may be described provided maximum temperature $\geq 37^{\circ}\text{C}$
Warm Night	When maximum temperature remains 40°C Warm Night: When minimum temperature departure 4.5°C to 6.4°C . Severe Warm Night: When minimum temperature departure $> 6.4^{\circ}\text{C}$.
Cold Wave	When minimum temperature of a station $\leq 10^{\circ}\text{C}$ for plains and $\leq 0^{\circ}\text{C}$ for hilly regions. (a). Based on departure Cold Wave: Minimum Temperature Departure from normal -4.5°C to -6.4°C . Severe Cold Wave: Minimum Temperature Departure from normal $\leq -6.5^{\circ}\text{C}$ (b) Based on actual Minimum Temperature (for Plains only) Cold Wave : When Minimum Temperature is $\leq 4.0^{\circ}\text{C}$ Severe Cold Wave: When Minimum Temperature is $\leq 2.0^{\circ}\text{C}$ (c) For Coastal Stations When Minimum Temperature departure is $\leq -4.5^{\circ}\text{C}$ & actual Minimum Temperature is $\leq 15^{\circ}\text{C}$
Cold Day	When minimum temperature of a station $\leq 10^{\circ}\text{C}$ for plains and $\leq 0^{\circ}\text{C}$ for hilly regions Based on departure Cold Day: Maximum Temperature Departure from normal -4.5°C to -6.4°C . Severe Cold Day: Maximum Temperature Departure from normal $\leq -6.5^{\circ}\text{C}$
Fog	Phenomenon of small droplets suspended in air and the horizontal visibility $< 1\text{km}$ Moderate Fog: When the visibility between 500-200 metres Dense Fog: when the visibility between 50- 200 metres Very Dense Fog: when the visibility < 50 metres
Thunderstorm	Sudden electrical discharges manifested by a flash of light (Lightning) and a sharp rumbling sound (thunder)
Dust/Sand Storm	An ensemble of particles of dust or sand energetically lifted to great heights by a strong and turbulent wind.
Frost	Ice deposits on ground Air temperature $\leq 4^{\circ}\text{C}$ (over Plains)
Squall	A strong wind that rises suddenly, lasts for atleast 1 minute. Moderate: Wind speed 52-61 kmph Severe: Wind speed 62-87 kmph Very Severe: Wind speed > 87 kmph
Sea State	Effect of various waves in the sea over specific area Rough to very rough: Wind speed 41-62 kmph (22-33 knots) & Wave height 2.5-6 metre High to very high: Wind speed 63-117 kmph (34-63 knots) & Wave height 6-14 metre Phenomenal: Wind speed > 117 kmph (> 63 knots) & Wave height > 14 metre
Cyclone	Cyclonic Storm: Wind speed 62-87 kmph (34-47 knots) Severe Cyclonic Storm: Wind speed 88-117 kmph (48-63 knots) Very Severe Cyclonic Storm: Wind speed 118-185 kmph (64 - 89 knots) Extremely Severe Cyclonic Storm: Wind speed 186-220 kmph (90 -119 knots) Super Cyclone Strom: Wind speed > 220 kmph (> 119 knots)
