

**Government of India**  
**Ministry of Earth Sciences**  
**India Meteorological Department**

**Dated: 06<sup>th</sup> February, 2020**

## **Current Weather Status and Outlook for next two weeks**

### High lights of the past week

- **Cold Wave conditions** had been observed at most places over Punjab on one day; at many places over Punjab on one day; at a few places over Haryana, Chandigarh & Delhi on two days during the week. The **lowest minimum temperature of 2.1<sup>o</sup>C** had been recorded at **Bhatinda (Punjab) on 5<sup>th</sup> February 2020** over the plains of the country during the week.
- **Dense to very dense** fog had been observed at isolated places over Punjab on five days, over Haryana, Chandigarh & Delhi on four days, over Uttarakhand, Gangetic West Bengal and Chhattisgarh on one day each during the week.

### Weekly Rainfall Scenario (30<sup>th</sup> January to 05<sup>th</sup> February 2020)

During the week, rainfall was below Long Period Average (LPA) by 59% over the country as a whole. Details are given below:

Regions	Actual Rainfall(mm)	Normal Rainfall(mm)	% Departure from LPA
<b>Country as a whole</b>	<b>1.7</b>	<b>4.3</b>	<b>-59</b>
<b>Northwest India</b>	<b>1.0</b>	<b>7.4</b>	<b>-87</b>
<b>Central India</b>	<b>2.3</b>	<b>1.8</b>	<b>+29</b>
<b>South Peninsula</b>	<b>0.6</b>	<b>1.1</b>	<b>-45</b>
<b>East &amp; northeast India</b>	<b>3.4</b>	<b>7.1</b>	<b>-52</b>

The Meteorological sub-division-wise rainfall for the week is given in **Annexure I**.

## Seasonal Rainfall Scenario (01<sup>st</sup> January to 05<sup>th</sup> February 2020)

For the country as a whole, cumulative rainfall during the winter season till 5<sup>th</sup> February, 2020 is 43% above LPA. Details of the rainfall distribution over the four broad geographical regions of India are given below:

Regions	Actual Rainfall(mm)	Normal Rainfall(mm)	% Departure from LPA
Country as a whole	29.1	20.3	+43
Northwest India	57.4	38.6	+49
Central India	15.8	8.7	+81
South Peninsula	7.0	8.9	-21
East & northeast India	29.8	23.5	+27

Cumulative seasonal rainfall is given in **Annexure II**.

## Chief synoptic conditions as on 06<sup>th</sup> February 2020

- A feeble Western Disturbance seen a cyclonic circulation over north Pakistan and adjoining Jammu & Kashmir at mid-tropospheric levels.
- A cyclonic circulation lies over Madhya Maharashtra & neighbourhood and a trough in easterlies at runs from South Interior Karnataka to the centre of the above cyclonic circulation at lower tropospheric levels.
- A fresh Western Disturbance is likely to affect Western Himalayan Region from 11<sup>th</sup> February.

## Large scale features as on 06<sup>th</sup> February 2020

- Currently, warm El Niño Southern Oscillation (ENSO) neutral conditions are prevailing over equatorial Pacific Ocean and the latest Monsoon Mission Coupled Forecast System (MMCFS) forecast indicates cooling of SSTs in coming season and ENSO-neutral conditions are likely to continue for the entire forecast period.
- At present, weak positive Indian Ocean Dipole (IOD) conditions are observed over Indian and the latest MMCFS forecast indicates positive IOD conditions are likely to weaken further and turn into neutral IOD conditions during JFM season.
- The convectively active phase of the Madden–Julian Oscillation (MJO) is currently in Phase-5 with amplitude nearly 1. It is likely to enter into Phase -6 with same amplitude during next one week.

## Forecast for next two weeks

### Weather systems and associated Precipitation & temperature pattern during week 1 (06<sup>th</sup> – 13<sup>th</sup> February 2020) and week 2 (14<sup>th</sup> - 20<sup>th</sup> February 2020)

#### **Week 1 (06<sup>th</sup> – 13<sup>th</sup> February 2020)**

- Under the influence of current Western Disturbance light isolated rain/snow very likely to occur over Western Himalayan region during next two days, Thereafter under the influence of a fresh Western Disturbance light/moderate isolated to scattered rain/fall very likely to occur over Western Himalayan region during 11<sup>th</sup> to 13<sup>th</sup> February, 2020.
- Due to confluence between westerlies and easterly winds from Bay of Bengal at lower tropospheric levels, scattered to fairly widespread rainfall/thundershowers over Vidarbha, Chhattisgarh. Gangetic West Bengal and Odisha during next 3 days. **(Annexure III & IV).**
- Cumulative precipitation is likely to be below normal over Jammu & Kashmir, Ladakh, Himachal Pradesh, Uttarakhand, Punjab, Arunachal Pradesh, Assam & Meghalaya. It is likely to be above normal over Odisha, Chhattisgarh, Telangana and coastal Andhra Pradesh. No rain likely over remaining parts of the country. **(Annexure III & IV).**

#### **Week 2: (14<sup>th</sup> - 20<sup>th</sup> February 2020)**

- Cumulative precipitation is likely to be below normal over Jammu & Kashmir, Ladakh, Himachal Pradesh, Uttarakhand, Punjab, Arunachal Pradesh, Assam & Meghalaya. No rain likely over remaining parts of the country.

### **Minimum Temperatures**

#### **Week 1: (06<sup>th</sup> – 13<sup>th</sup> February 2020)**

- During week 1, night minimum temperatures are likely to be below normal over major parts of India, outside interior Karnataka, Rayalaseema, south coastal Andhra Pradesh and Tamil Nadu, where they are likely to be markedly above normal during some of the days. **(Annexure V).**

### **Minimum Temperatures**

#### **Week 2: (14<sup>th</sup> - 20<sup>th</sup> February 2020)**

- During week 2, it is likely to be below normal over most parts of the country outside some parts of west coast **(Annexure V).**

**Cyclogenesis probability:**

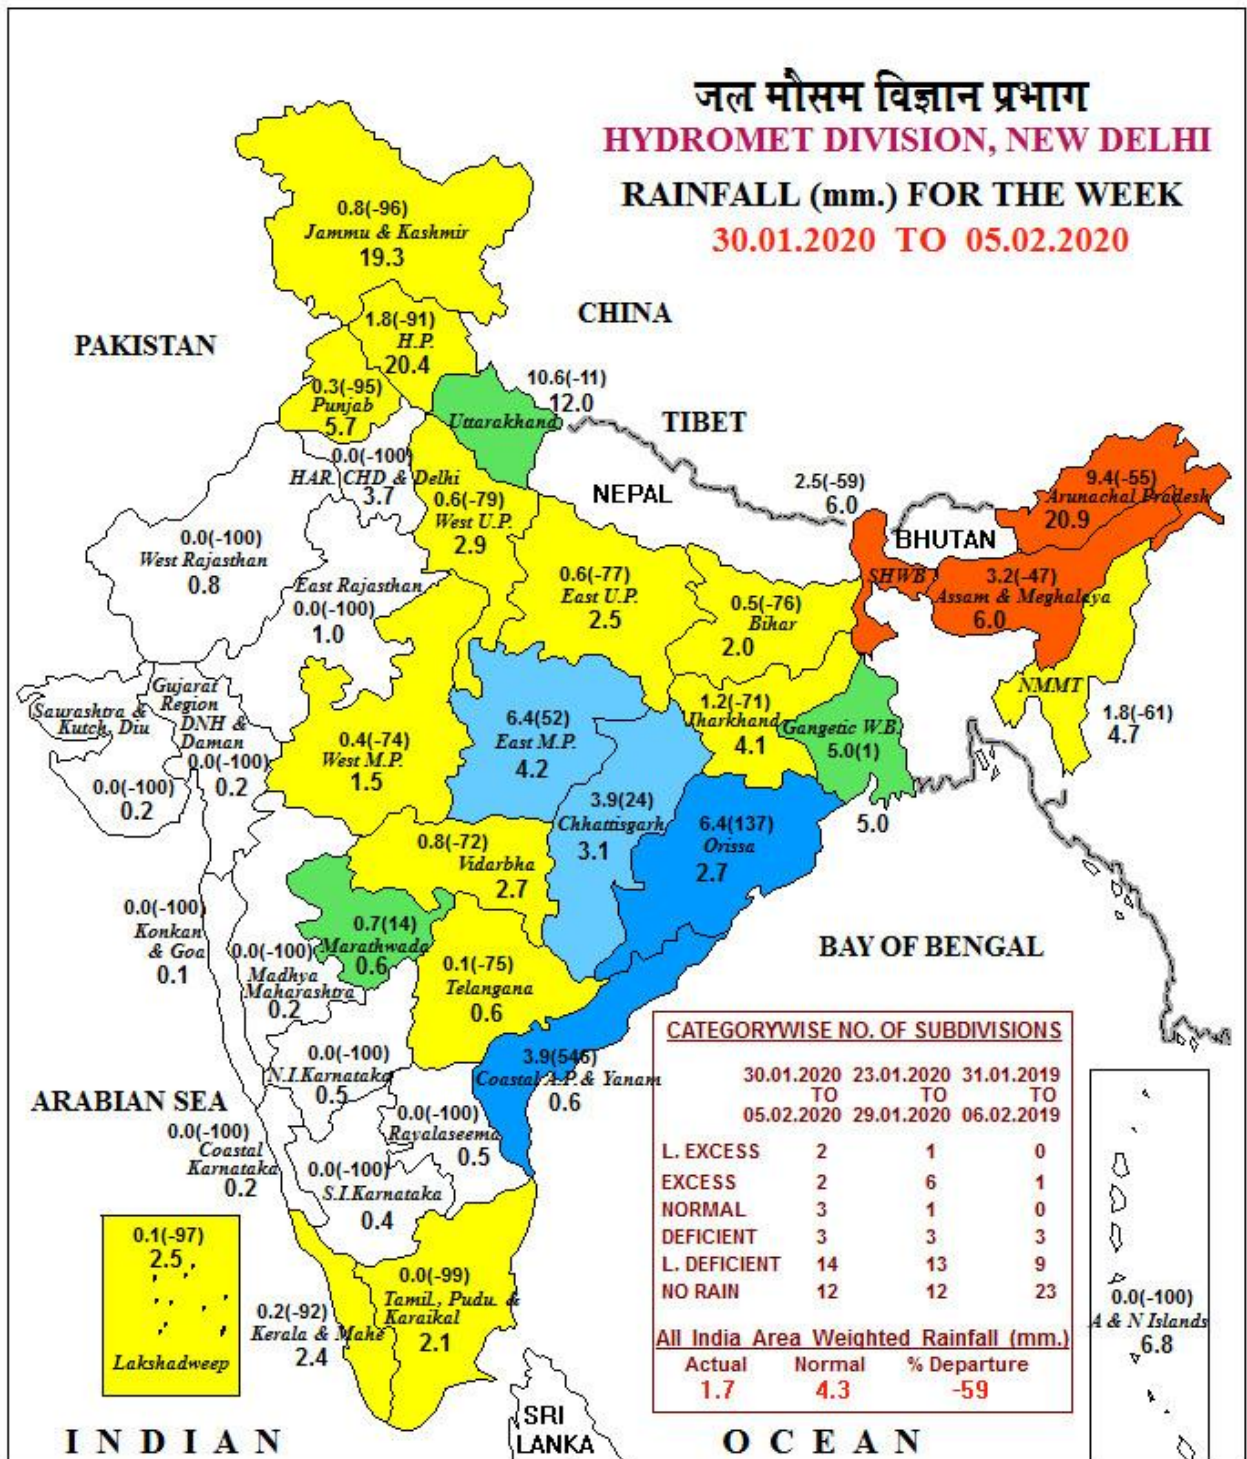

- No cyclogenesis is likely over North Indian Ocean during weeks 1 and 2.

**Next weekly update will be issued on Thursday, the 13<sup>th</sup> February 2020.**

## Annexure I

# भारत मौसम विज्ञान विभाग INDIA METEOROLOGICAL DEPARTMENT

## जल मौसम विज्ञान प्रभाग HYDROMET DIVISION, NEW DELHI RAINFALL (mm.) FOR THE WEEK 30.01.2020 TO 05.02.2020

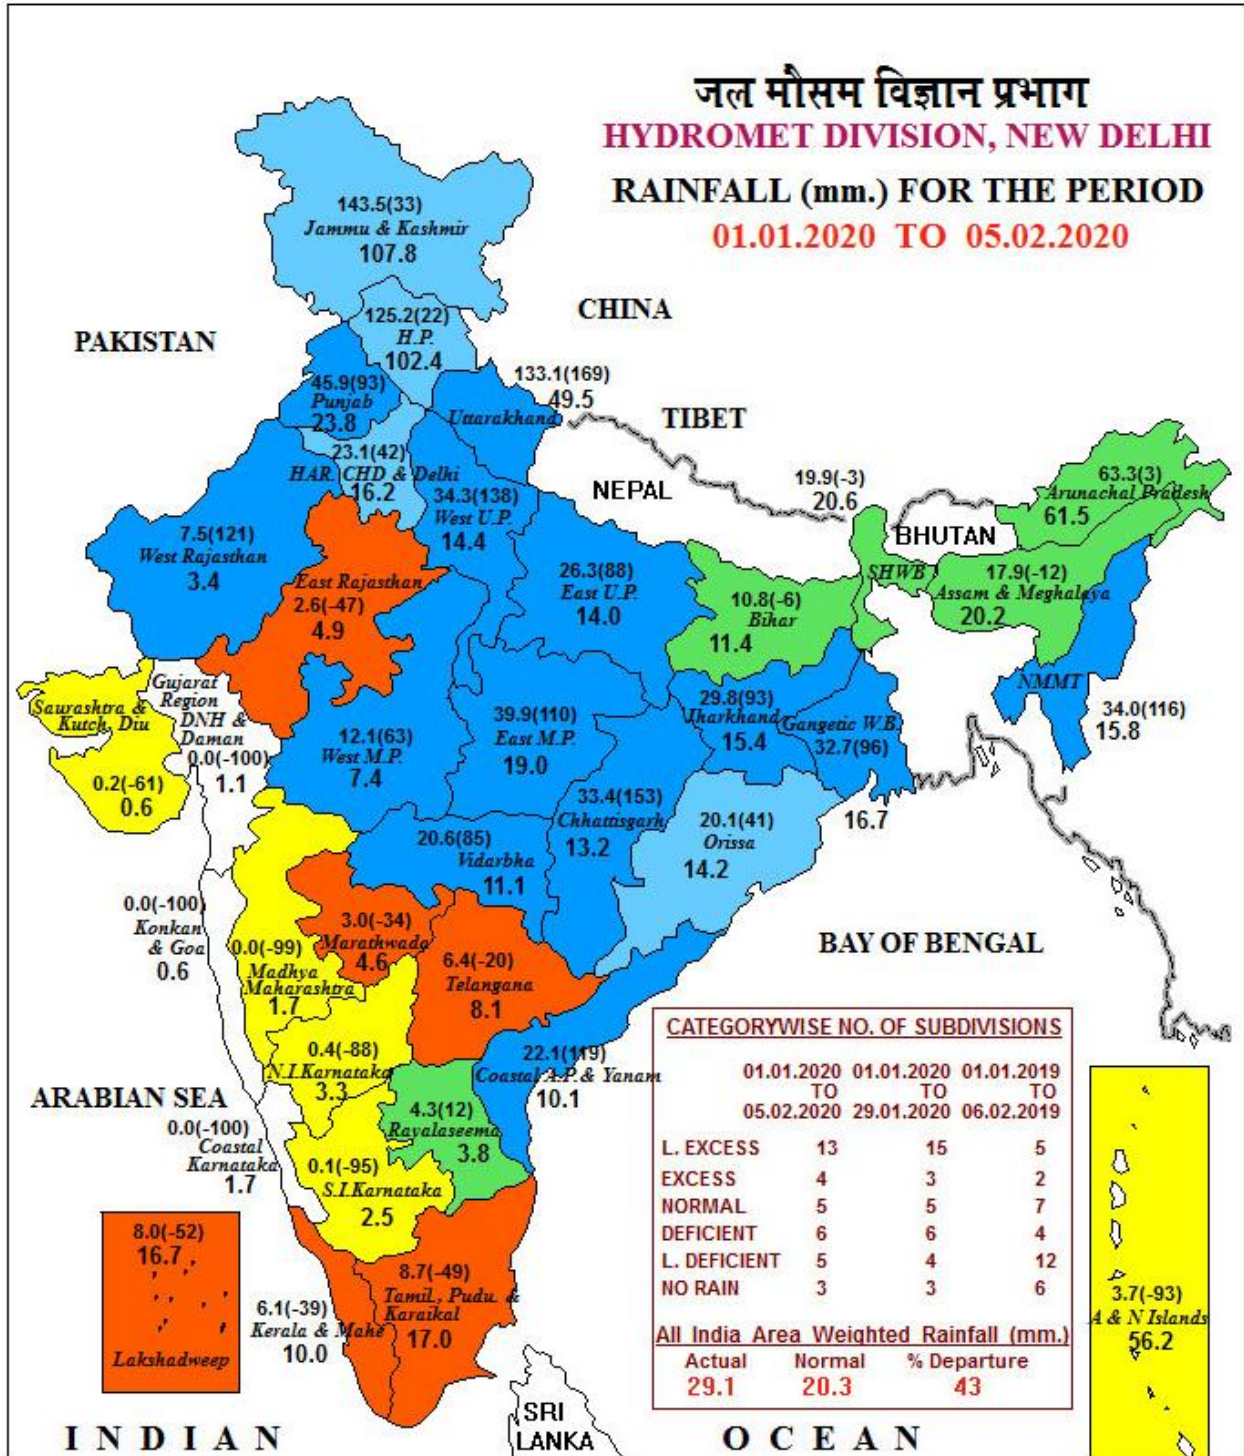

LEGEND: ■ L. EXCESS (+60% OR MORE) ■ EXCESS (+20% TO +59%) ■ NORMAL (+19% TO -19%)  
■ DEFICIENT (-20% TO -59%) ■ L. DEFICIENT (-60% TO -99%)  NO RAIN (-100%)  NO DATA

**NOTES:**

- (a) Rainfall figures are based on operational data.
- (b) Small figures indicate actual rainfall (mm.), while bold figures indicate Normal rainfall (mm.)  
Percentage Departures of Rainfall are shown in Brackets.
