

Dated: 19th December, 2024

Dear Industry Partners,

Greetings from the India Meteorological Department !

As we approach a significant milestone, We are pleased to inform that the India Meteorological Department (IMD) is celebrating its 150th anniversary in 2024-2025. Established in 1875, IMD has played a pioneering role in systematic weather and climate observations, forecasting, and reporting of weather phenomena in the Indian subcontinent. The evolution of meteorology as a modern physical science owes much to the dedicated scientists and technologists associated with the IMD throughout its illustrious history. To commemorate the milestone of 150 years, IMD has been launching a series of events, exhibitions, and international seminars besides interactive sessions with students to encourage them to explore meteorology and take up atmospheric sciences as their career.

A highlight of our year-long celebrations will be a grand exhibition at Bharat Mandapam on January 15th, 2025. This event will feature IMD and its sister organizations, along with various government & non-government entities, which aims to provide an engaging visual experience for educational institutions, the scientific community, industry representatives, and the general public. **We invite our industry partners who have been assisting and are keen in collaborating with IMD through their state of the art innovative products related to Meteorological Instrumentation. The exhibition event will be an international platform for our industry partners to showcase their innovations and association with modern sciences through relevant charts, working models, and prototypes that align with your vision.**

Shri Gajendra Kumar, Scientist 'F', IMD New Delhi (Tel: 011-24344245 (O) / +919818449464 (M); Email: gkumarimd@gmail.com), will serve as the Nodal Officer for this endeavour from this Department.

We look forward to your participation and support in making this celebration of incredible journey a success.

With regards,

Yours sincerely,

19.12.2024
(M. Mohapatra)

Director General of Meteorology
